

BUGS:-

Issue: Same excuse appears every time

My C++ program is generating the same excuse every time I run it.

I am using rand() to pick a random template, but the output does not change.

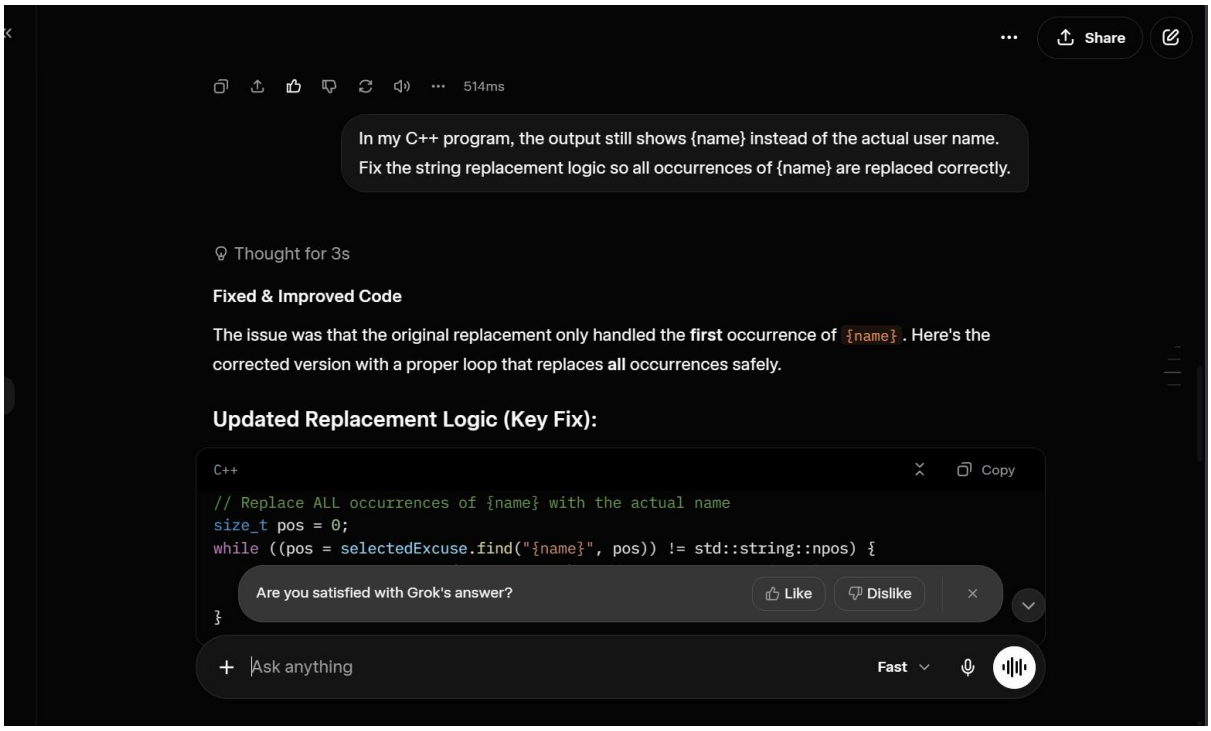
Explain the reason and fix the code so that different excuses appear on each run.

Expected Fix

- Problem: rand() not seeded
- Solution: Add

srand(time(0));

Bug: {name} not replaced

In my C++ program, the output still shows {name} instead of the actual user name.


Fix the string replacement logic so all occurrences of {name} are replaced correctly.
